CHAPTER 1

INTRODUCTION

1.1 The Final Year Project

The two-trimester Final Year Project 1 and 2 is one of the most important parts of the undergraduate studies. With heavy credit hours, the FYP subject will be one of the most essential and most time-consuming, taking up many hours over two-trimesters. Why is this activity so important that it is worth spending all this time, and why is it a required part of the FIST undergraduate program? The answer is that information science and technology are both a theoretical and an empirical, hands-on discipline, and there are many skills that simply cannot be taught in the classroom. They can only be learned through practical experience, such as, working on a large project that exposes you to some of these important ideas, such as:

- **Interacting with users.** With most classroom projects students are given a problem and told to solve it. In the real world, however, problem statements are not given out in a finished form. Students must develop the problem statement through meetings and discussions with potential users of their software.
- **Developing specification and design documents.** In Software Engineering or Software Analysis and Design subjects, students learned formal methods for representing specification and design documents. However, an assignment or project developed in class is usually too small to demonstrate their real benefits. That is not the case with the final year project. It involves the development of a large, complex software package that requires the effective use of software development tools. Without these formal design and implementation methods, the scale of the project will quickly overwhelm the student.
- **Implementing project.** There are two types of projects classified by the faculty;

- ***Application based project:***
Must include but not limited to development of new or improvement of existing system, framework design, implementation, coding, development techniques and methods, working prototype and usability studies from test data or survey.

- ***Research based project:***
Must include but not limited to proof of concept and novelty, either new algorithms or enhancement of ideas supported by information technology related data or laboratory data or lab simulation or lab prototype, model or publication.

- **Improving writing and oral presentation skills.** Two fundamentally important parts of the project are the student's written documents and the oral presentations. At the end of FYP 1, the student will deliver an Interim Report and demonstrate the prototype or research work. At the end of FYP 2, the student will produce a Final Report and present his/ her work.

There is much more to a final year project than simply “writing lots of code” or “experimenting with data” or “writing lots of text”. Instead, it is a chance to put into practice all the concepts that, until now, have only been studied formally. By the end of the project students will have developed a set of practical skills that will serve them well throughout their professional career.

1.2 Selecting a Project Title

The first step, the student has to pick a project title that he/she would enjoy working on. The projects offered may vary substantially in breadth, depth and degree of difficulty. The most important thing is to shortlist a set of projects that are right for you. Some students are better suited to well-defined and relatively safe projects that provide scope for demonstrating proficiency with a low risk of failure. Other students are better advised to tackle harder, riskier projects that require a high degree of original input and/or technical problem solving. If you are looking to achieve high marks in the

project and, particularly, if you are hoping to win one of the illustrious projects prizes, or achieve "Distinguished Project" status, you should choose your shortlist with particular care.

A list of project titles will be released on the FYP website at least one month prior to the first of FYP 1. During this period, students can approach the supervisors to obtain more detail information about the title listed. The potential supervisors will be happy to offer advice on the suitability of a project, given your individual background, strengths and ambitions. Once the supervisor agrees to supervise the student, the student shall request the supervisor to sign the FYP Requisition form and submit the form to faculty office.

It is important to balance ambition and realism when making a choice. Start thinking about possible topics and titles well before the course begins. Consider ideas that sound interesting because of a desire to know more about a subject, a desire to learn how to use a particular software package, or a goal of working professionally in this area after graduation. Perhaps you would like to investigate a research idea presented in one of your classes. Whatever the reason, the project topic should be something that you choose rather than something assigned to you. It is much more enjoyable to put in time on a project if it is yours rather than someone else's. Start by reading technical books, journal papers, professional articles, or interesting web pages. Talk with faculty and other professionals - perhaps people you are working with for industrial training. Your goal is to have a well-defined problem statement ready for review as early as possible.

1.3 Proposing a Project Title

Student may propose a project title with the following conditions:

- Company-link project. There must be a mentor from the company to supervise the project. The company supervisor must agree with MMU copyright term (stated in the student thesis).
- Project to be participated in competition. The project must be related to the theme of the competition.
- Potential project. The project may create or bring significant improvement to individual, organisation or society.

Note that, student must find a potential faculty supervisor to supervise his/ her proposed title. Student must obtain approval for his /her project proposal from the faculty before the beginning of FYP 1.

PROJECT SCHEDULE

2.1 Overview

The project schedule described in this chapter is only valid for long-long trimesters or two long trimesters, otherwise, the project will be considered as special case FYP that carried out in short-long or long-short trimesters. For special case FYP, student has to follow the FYP Timeline provided by the faculty and not the project schedule described in this chapter.

2.2 TPR 6313 Final Year Project 1

FYP 1 is concerned with developing the problem specification and design. The progress on these activities will be monitored through regular weekly meetings with your supervisor. **The requirement for FYP 1 registration is student must complete at least 60 credits hours (excluding art & humanity subjects).**

By the second week of the trimester students must have a short, written description of the project. Then, for the next 11 weeks, a complete and precise problem statement needs to be developed, followed by the formal design of an experimental system that solves this problem. In addition, students must also prepare an implementation plan that will guide their activities in FYP 2 and build a working prototype that demonstrates the functionality of the students proposed research/software.

At the end of Week 11, students are required to produce two “deliverables.” The first is the Interim Report (Week 11) describing what you have done. This includes literature search, methodology, interviews, market surveys, statistical analysis as well as the completed specifications and design. Following are the important events highlighted for FYP 1.

2.2.1 Important Events for FYP 1

- **Before Week 1**
 - Students view the list of FYP titles and information.
 - Students select the FYP titles and approach respective supervisor.
 - Students register the FYP subject in ICEMS.
- **Week 1**
 - Supervisor assign student to project.
 - Students submit the FYP title requisition form to faculty office.
 - Student attend FYP briefing.
- **Week 1 - 11**
 - Students carry out FYP activities e.g. literature review, planning, analysis and design, interim report etc.
 - Students meet the supervisor at least once a week. A meeting log must be completed by each student for each meeting.
- **Week 12**
 - Students submit the **Interim Report**, and students must make sure that their report follows the formatting requirements (e.g. layout, font size, references, etc).
 - Students arrange the presentation time slot with supervisor.
- **Weeks 13 - 14**
 - Project presentation and demonstration of the prototype or research work.

2.3 TPR 6323 Final Year Project 2

FYP 2 is concerned with experiment or system implementation as well as the research contribution of the project. Students' tasks are to take the specification and design work done during the previous trimester and construct a finished, working system that meets all specifications. Students will again meet weekly with their supervisor to describe the project activities and detail its progress. Students have 11 weeks to complete the implementation. In Week 12, the student is required to submit the Final Report with a technical report as appendix and give a presentation and

demonstration on Week 13 and 14 of the completed system or result to the supervisor and moderators. Following are the important events highlighted for FYP 2.

2.3.1 Important Events for FYP 2

- **Week 1**
 - Student re-register the FYP subject.
- **Week 1 - 11**
 - Students carry out FYP activities e.g. core results/ findings of the project, coding, testing, implementation, final report and etc.
 - Students meet the supervisor at least once a week. A meeting log must be completed by each student for each meeting.
- **Week 12**
 - Students submit the Final Report (for evaluation) and make sure your report follows the formatting requirements (e.g. layout, font size, references, etc).
 - Students arrange the presentation time slot with supervisor.
- **Week 13 - 14**
 - Project presentation and demonstration of the prototype or research works.
- **Week 15 - 16**
 - Submit the finalised **Final Report**.

2.4 FYP Timeline

The FYP Timeline shows the important activities that will be carried out in FYP 1 and 2. The student must be aware of the important activities highlighted in the timeline. The FYP Timeline is provided separately in the faculty FYP website.

GRADING AND ASSESSMENT

3.1 Grade Distribution

Each student will be required to pass Final Year Project (FYP) 1 (TPR6313) to take FYP 2 (TPR6323). Student's activities in **FYP 1 will be evaluated as Pass/Fail** subject and **FYP 2 will be graded in GPA/ CGPA calculation**. The following chart describes the marks and final percentage distribution for FYP 1 and 2:

Table 3.1: Grade Distribution for FYP 1 and FYP 2

TPR6313 FYP 1		TPR6323 FYP 2	
Components	Marks in %	Components	Marks in %
Continuous assessment			
Observation	30	Observation	30
Presentation	10	Presentation	10
Final Assessment			
Interim Report	20	Final Report	10
Project Design	40	Project Implementation	50
Total Marks	100	Total Marks	100
Type	Pass/ Fail	Type	Graded in GPA/ CGPA

The descriptions for each evaluation component and rubrics can be downloaded in the FYP website with filename: **FYP evaluation criteria**. The summary of the assessment and criteria are shown in **Table 3.2** and **Table 3.3**.

Table 3.2: Evaluation Criteria for TPR6313 FYP 1

Assessment	Criteria
Observation (30%) <i>Continuous assessment</i>	Planning & Organising (Meeting Log) - Student surpasses the plan/schedule to complete the FYP without supervisor guidance and have at least 5 meeting logs that are thorough/detailed. Understanding Of Tasks/Objectives - Student can make good improvements on the tasks/objectives for the FYP without supervisor guidance. Learning Skills - Student's learning ability surpasses the technical/non-technical requirements of FYP tasks without supervisor guidance. Analysis & Problem Solving - Student can troubleshoot/solve ingeniously the problems faced in FYP tasks without supervisor guidance. Discipline & Ethical Behaviour - Student surpasses the handling of deadlines/rules/expected decency in completing the FYP without supervisor guidance. Library Literacy Course (LLC) - Student attended the LLC and can implement well the lesson learned without supervisor guidance.
Presentation (10%) <i>Continuous assessment</i>	Knowledge and methodology on the topic - Displayed an excellent grasp of the research topic. Demonstrated excellent mastery of content, application and implications. Excellent research depth across range of resources through complex IT project activities. Critical Thinking on expected outcome, analysis and conclusion - Displays excellent project outcome and include extensive elaboration and critical explanation to the presented outcome
Interim Report (20%) <i>Final assessment</i>	Structure and organisation - The report is exceptionally well-organized and structured logically. It has a clear introduction, well-defined sections, and a coherent flow. Formatting of the report - The report is exceptionally well-formatted, fully adhering to all given formatting guidelines, and enhancing professionalism and readability. Citation and reference

	- Citations and references are precise, reflecting thorough research and perfect adherence to APA style guidelines. Spelling and grammar - The report is free from spelling and grammar errors, ensuring clarity and professionalism.
Project Design (40%) <i>Final assessment</i>	Introduction - Exceptionally introduces the project/research topic with precision and insight. Provides comprehensive background information to provide context. Problem statement and objectives - The problem is clearly identified and convincingly justified by evidence, indicating a comprehensive understanding of the problem. Relevant and achievable objectives are precisely defined. Literature review - An exhaustive set of sources reviewed. All sources are highly relevant. Identification of missing gaps is not only clear and well-supported but also includes an explanation of the significance of these gaps for the research/project. Methodology and planning - Exceptionally clear and relevant research/project directions that are closely aligned with the identified gaps in the literature review. The chosen methodology is not only clearly explained and justified but also demonstrates a deep understanding of potential challenges and limitations. Planning is well-structured, with precise milestones and a comprehensive Gantt chart that accounts for potential contingencies. Software or research design - Presents an outstanding software or research design that is highly detailed and comprehensive. The design consists of all necessary design components. Demonstrates exceptional consideration for important design choices. Preliminary result/ critical discussion/ prototype - Result/ discussion/ prototype is thoroughly and critically presented to ICT complex problems, which covers all the component parts or sub-problems. Conclusion and future work - Conclusion is thoroughly and critically presented to objective and well supported by

	results/findings with significant improvements for future works. Overall technical quality of the project • Technical details are thoroughly and critically presented and fully supported by details and/or clarifying information which enhances understanding. Student is able to solve all technical problems independently
--	--

Table 3.3: Evaluation Criteria for TPR6323 FYP 2

Assessment	Criteria
Observation (30%) <i>Continuous assessment</i>	Planning & Organising (Meeting Log) - Student surpasses the plan/schedule to complete the FYP without supervisor guidance and have at least 6 meeting logs that are thorough/detailed. Technical Skills - Student surpasses the technical skills required to complete FYP tasks without supervisor guidance. Motivation, Responsiveness & Flexibility - Student demonstrates exceptional continuous effort and adapts quickly to changes in FYP tasks without supervisor guidance. Analysis & Problem Solving - Student can troubleshoot/solve ingeniously the problems faced in FYP tasks without supervisor guidance. Discipline & Ethical Behaviour - Student surpasses the handling of deadlines/rules/expected decency in completing the FYP without supervisor guidance. Innovation & Entrepreneurship - Student demonstrates excellent ingenuity in FYP tasks and very strong entrepreneurship-oriented outcome without supervisor guidance.
Presentation (10%) <i>Continuous assessment</i>	Knowledge and methodology on the topic - Displayed an excellent grasp of the research topic. Demonstrated excellent mastery of content, application and implications. Excellent research depth across range of resources through complex IT project activities. Prototype demonstration/ research report presentation - Prototype demonstration or research report presentation is outstanding, showcasing a highly innovative and well-executed project with flawless communication and engagement. Critical Thinking on outcome, analysis, results and conclusion - Displays excellent project outcome and include extensive elaboration and critical explanation to the presented outcome
Final Report (10%) <i>Final assessment</i>	Structure and organisation The report is exceptionally well-organized and structured logically. It has a clear introduction, well-defined sections, and a coherent flow. Formatting of the report

	- The report is exceptionally well-formatted, fully adhering to all given formatting guidelines, and enhancing professionalism and readability. Citation and reference - Citations and references are precise, reflecting thorough research and perfect adherence to APA style guidelines. Spelling and grammar - The report is free from spelling and grammar errors, ensuring clarity and professionalism.
Project Implementation (50%) <i>Final assessment</i>	Improvement made after FYP 1 (abstract, introduction, problem statement, objectives, literature, methodology and planning, software/ framework design and prototype (if any)) - Excellent improvement has been made on the report with additional literature added with critically evaluates relevant sources and improve on methodology content Objectives met - All objectives have been not only met but surpassed with outstanding results. Exceptional creativity, innovation, and/or resourcefulness were demonstrated in achieving objectives. The achievement of objectives has had a significant and positive impact on the overall project or task. Project implementation/ experimental setup - The project implementation or experimental setup is executed flawlessly with meticulous attention to detail. All components are exceptionally well-organized, demonstrating an exceptional level of precision and planning. Advanced techniques, cutting-edge technology, or innovative methods are employed, resulting in outstanding results. Project testing and prototype or research methods/ techniques/ algorithm/ experimental evaluation and result and critical discussion - The project testing, methods, techniques, or algorithm evaluation is conducted flawlessly with an exceptional level of rigor and precision. The evaluation design is highly sophisticated and comprehensive, demonstrating advanced knowledge and creativity. Results are exceptional, showcasing groundbreaking insights or achievements in the field. Conclusion and future work - Conclusion is thoroughly and critically presented to objective and well supported by

	results/findings with significant improvements for future works. Overall technical quality • Technical details are thoroughly and critically presented and fully supported by details and/or clarifying information which enhances understanding. Student can solve all technical problems independently Completeness of the application-based or research-based project • The project, whether application-based or research-based, is exceptionally complete, fully addressing all aspects, objectives, and requirements with outstanding quality. Technical paper (Discuss with your respective supervisor for format details and requirement) • Content is highly organized, illustrating the overall argument with finer details. Show strong links of the paragraphs to the argument and future directions. Includes strong observation relevant to argument.
--	---

3.2 Assessment

The supervisor and moderator/panel will assess the student's performance for each criterion in 6 levels (0-5) as described below:

- **5** *Excellent: The student's performance is well beyond expectation*
- **4** *Very Good: The student's performance is above expectation at his/her*
- **3** *Adequate: The student's performance is acceptable and expected at his/her level*
- **2** *Inadequate: The student's performance is below expectation*
- **1** *Poor: The student's performance is extremely below expectations.*
- **0** *Very Poor: No evidence of work.*

In order to be graded as excellent for an application-based project, the student will have to develop an impressive/ novel application with fully functional components, various unique features, excellent coding style and file structures, adopt proper software development techniques and methods, accompanied with excellent documentation and most importantly the project has to be demonstrable to the public and suitable to for participation in competitions and exhibitions. **Students who**

obtained a distinction grade for his/ her project must participate in an exhibition or competition if requested by the supervisor or faculty.

OR

For an excellent research based project, the student has to show their quality of research work at the highest level of undergraduate studies by providing an in-depth literature review, developed novel algorithms, new breakthrough, enhancement of ideas or framework that is supported by excellent experimental results using benchmark and standard database, strong proof of concept through surveys, statistics or laboratory prototype and has the **potential to generate at least one local/ international conference/ journal publication.**

AND

The FYP supervisors are required to run the FYP report through the plagiarism checking software approved by the University (Turnitin). The similarity index for each chapter shall not exceed 10%. Should the similarity index be more than 10%, the supervisors are required to provide the justifications.

The similarity index checking must be performed with below requirement:

A screenshot of a Turnitin interface showing the 'Exclude matches by:' section. It contains two radio button options: 'Word Count' and 'Percentage'. The 'Word Count' option is selected, with a text input field set to '5' and the unit 'words'. The 'Percentage' option is unselected, with a text input field set to '0' and the unit '%'.

Exclude matches by:*	
☒ Word Count:	5 words
☐ Percentage:	0 %

All A+/A/A- projects must fulfil the requirement of not more than 10% Similarity Index by chapter.

FYP report with Similarity Index more than 10% by chapter, should only entitle the highest, grade B+. FYP Committee decision is FINAL.

REPORT CONTENT AND SUBMISSION

4.1 Warning Notice

TAKE NOTICE that the unauthorized copying, reproducing, sharing and / or downloading of any copyrighted material or an attempt to do so whether by use of the University's facilities or outside networks / facilities whether in hard copy or soft copy format, shall constitute an infringement under the Copyright Act 1987 and shall be a strict liability offence.

4.2 Content of FYP Report

This section describes the general content structure of the undergraduate FYP report. It covers information on the arrangement of the report, content and chapters. The FYP report will be rejected if the report is not presented in the form required in this guide.

4.2.1 Cover

The cover of the report must contain (in order) the title of the FYP, student's full name, session, name of faculty, Multimedia University and the month and year of submission. For the hard cover of the Final Report, all letters must be printed in boldface (gold) capital letters. The minimum size for the letter is 5mm in height. Refer to example in Appendix A. The hard copy cover must be in dark blue as shown in Appendix K.

4.2.2 Title Page

The cover of the report must contain (in order) title of the FYP, student's full name, session, statement of fulfilment, name of faculty, Multimedia University and the month and year of submission date. Refer Appendix F.

4.2.3 Copyright Page

Student MUST follow and complete the copyright page according to the content and format shown in .

4.2.4 Declaration Page

Students MUST declare with signatures stating the report has been done by them and no plagiarism has been included. Please refer to Appendix H for blue cover submission, and Appendix H1 for finalised submission.

4.2.5 Acknowledgement

Student may acknowledge the assistance of various individuals or organisations in successful completion of the FYP. The content of this section shall not exceed one page.

4.2.6 Table of Contents

This page should contain a list of chapters, sub-titles and referred page number of the report.

4.2.7 Abstract

In one or two pages, certainly not more than two, summarize the main features of the project, what problem it is solving and how the student proposes to solve it. This brief overview should give a snapshot of the overall structure of the FYP.

4.2.8 List of Tables

This page must list all the tables described in the project report together with the table numbers, labels and page numbers.

4.2.9 List of Figures

This page must list all the figures described in the project report together with the figure numbers, labels and page numbers.

4.2.10 List of Abbreviations/ Acronyms/ Notation /Symbols (if applicable)

All abbreviations, acronyms, notation and symbols described in the project report should be listed on this page according to alphabetical order, together with their definitions or names.

4.2.11 List of Appendices

This page must list all the appendices in the project report together with the appendix number, labels and page numbers.

4.2.12 Main Content (Body of the Report)

The main content of the report should be divided into appropriate chapters. Each chapter must begin on a new page. The title of each chapter must be provided and related to the main content. A chapter must contain sections with appropriate sub-titles and numbers. The body of the report must be written in paragraphs that describe information relevant to the title or sub-title. There must be continuity flow between two paragraphs and long paragraphs should be avoided.

Student should adopt the appropriate body of the Interim Report in FYP 1 and body of the Final Report in FYP 2. Following are suggested main contents for each report.

- Suggested Contents of Interim Report (FYP 1)
 - Chapter 1: Introduction – objectives, scopes
 - Chapter 2: Literature Review
 - Chapter 3: *Methodology and planning
 - Chapter 4: *Software / research design
 - Chapter 5: *Preliminary result/ critical discussion/ prototype
 - Chapter 6: Conclusion

- Suggested Contents of Final Report (FYP 2)
 - Chapter 1: Introduction – objectives, scopes
 - Chapter 2: Literature Review
 - Chapter 3: *Methodology
 - Chapter 4: *The Solution (Complete expansion)
 - Chapter 5: *The Implementation Process/Results
 - Chapter 6: *Testing / Evaluation of findings
 - Chapter 7: Conclusion

Note that, the suggested contents with (*) above can be modified. Student **MUST** consult the supervisor for suitable chapter title and content of the report.

There should be continuity link between the Interim Report and the Final Report. The content described in Interim Report such as objectives, methodology, plan and design must be met, carried out and reported in Final Report. Otherwise, the student has to report the changes of plan and provide appropriate support and justification in the Final Report. The detail description for each chapter is described in Section 4.3.

In a formal report, the use of first-person reference such as “I”, “us”, “me”, “myself” and etc. in the main content should be avoided. In situation where self-reference is required, the self- reference could be made as “this study”, “this project”, “this research” or “the author”. Student must adopt an appropriate English writing level. Student must pay attention to correct spelling, grammar, punctuation, sentence structure and continuity.

4.2.13 References

All references of papers, journals, websites, tools, material, books, software and reference materials that the student has referred to within the report must be listed alphabetically and chronologically in this section following American Psychological Association (APA) style. Student must cite the references at the appropriate places in the content of the report where required. Students are encourage to use Mendeley (<https://www.mendeley.com/>) or Zotero (<https://www.zotero.org/>) for organising and citing the reference materials.

4.2.14 Appendices

Appendices are additional materials to the body of the report. The items in appendices include charts, graphics, display, essential program codes, screen shots, table, diagram and other items that may be too lengthy and inconvenient to be included in the body of the report. For example, the survey questionnaires and data sheets may be included as appendices. All the appendices must be listed in the List of Appendices page.

4.3 Main Content of Interim/ Final Report

Brief information about the body of the report is described in section 4.2.12. The following sections provide detail descriptions of the main content of Interim/ Final Report.

4.3.1 Chapter: Introduction (Interim/ Final Report)

How did the problem originally present itself to you in the first place, and how did it evolve over the course of the project. Give a detailed summary of the problem as well as a review of the literature or the market survey.

4.3.2 Chapter: Background and Literature Search (Interim/ Final Report)

Describe what you have discovered in your literature review. Does this problem exist anywhere else? Who is working on it? How have others solved it? Give references to some of the main articles/books/Web pages discussing this problem.

4.3.3 Chapter: Methodology (Interim/ Final Report)

Describe how the project work will be implemented. What methodology will be used? What tools and technique(s) will be employed? Describe the tools and techniques in detail and justify why you choose it? For all the tools and techniques used, give proper citation and references.

4.3.4 Chapter: Implementation Plan / Design (Interim Report only)

Outline in detail your approach to solving the problem using system development diagrams, flowcharts and schematic diagrams. Lay out the project implementation plan for the next semester. Discuss the project's target and milestone dates. If you will be implementing your project in discrete stages, describe them and discuss how far you think you will be able to get.

4.3.5 Chapter: Solution (Final Report only)

Describe the design and solution in detail. Student may include the appendices for essential computer codes, data sheet or other technical materials, but some summary or overview diagrams of the solution should be described in text and placed in the body of the report. This will help the reader get a sense for the overall structure of the solution.

4.3.6 Chapter: The Implementation Process/Results (Final Report only)

Describe the process you went through to complete the project and compare what actually happened with the goals you were trying to achieve. Highlight any major

variations from your original plans. Discuss the behaviour of the finished program, and show some of its functionality.

4.3.7 Chapter: Testing / Evaluation of findings (Final Report only)

For the implemented systems and software, tests should be conducted, and their results should also clearly be stated.

4.3.8 Chapter: Conclusion (Interim/ Final Report)

What has been accomplished for each research objective (Students should clearly state the conclusion for each project objective) what are the major things that you learned from this project? What work still needs to be done on the system and how can it be improved and/or enhanced? Do you have any future plans for this software package?

4.3.9 Technical Paper (Final Report only)

Student must consult the respective supervisor for suitable technical paper and format for the project. For research projects, the technical paper can be a conference or a journal paper. For application projects, the technical paper can be the user manual, API manual, technical analysis report etc.

4.4 Submission of Interim Report (TPR 6313 FYP 1)

Student must submit the following items on Week 12 in FYP 1 to the FYP Supervisor for evaluation.

1. **SOFTCOPY (1 copy in PDF format & 1 copy in word format)**
Interim Reports (Refer to FYP guideline (get from IPMS))).
2. **Email/share to your supervisor: ZIP/Online Drive Folder** that contains the softcopy of the project report, documents, codes, installation files, required software, references, etc. However, the supervisor can request student to print the report if needed.

3. **At least SIX (6) FYP Meeting Log sheets, including ONE from Library Literacy Course Attendance (from the library)** (Refer to Appendix A in FYP guideline) attached as an appendix. The FYP Meeting Log sheets must be signed and stamped by the supervisor.
4. The checklist for FYP interim report submission (Appendix B).

4.5 Submission of Final Report for Evaluation (TPR6323 FYP 2)

Student has to submit the following items on Week 12 in FYP 2 to the FYP Supervisor for evaluation.

1. **SOFTCOPY (1 copy in PDF format & 1 copy in word format)** Final Reports (Refer to FYP guideline)).
2. **Email/share to your supervisor: ZIP/Online Drive Folder** that contains the softcopy of the project report, documents, codes, installation files, required software, references, meeting logs, FYP report submission checklist, etc. However, the supervisor can request student to print the report if needed.
3. **At least SIX (6) FYP Meeting Log sheets (Refer to Appendix A in FYP guideline)** are attached as an appendix. The FYP Meeting Log sheets must be signed and stamped by the supervisor.
4. The checklist for FYP final report submission (Appendix C).

4.6 Submission of FYP Finalised Report after Approval (TPR6323 FYP 2 Only)

After the FYP 2 presentation, student is required to consult and seek for approval from supervisor to submit the following items **within 2 weeks** to the faculty via online form or drive.

- **SOFTCOPY (1 copy in PDF format & 1 copy in word format) FYP Finalised Report** (Refer to FYP guideline)). However, the supervisor/ faculty can request student to print the report if needed.

- **FYP title requisition form** (signed by both student and the supervisor before FYP 1 begins).
- **The checklist for FYP final report submission** (Appendix C in FYP guideline).
- **The signed & Stamped (By Supervisor & Panel) FYP Finalised Report Submission Form.**
- On the cover of the Final Report submission, the month of submission shall follow accordingly.
- ***Failure to submit the SOFTCOPY FYP Finalised Report on time will result in the TPR6326 FINAL YEAR PROJECT 2 mark being incomplete with grade status "I".***

4.7 Penalties and Failures

4.7.1 Late Submission

FIVE mark (5%) will be automatically deducted from the student project for late submission (each day) of interim/ final/ finalised report. Therefore, students have to ensure that they submit their FYP report on time. Student who does not submit the report for more than 5 days (including non-working days) after the submission due date may result in automatic failures.

4.7.2 Plagiarism

Student who is caught to have plagiarized will be **STRICTLY** penalized and may result in automatic failures.

4.7.3 Absence for Presentation

Student who does not present for presentation (without valid reason) may result in automatic failures.

CHAPTER 5

REPORT PREPARATION

5.1 Report Specification

The following describes the report specification. **The printing of the hardcopy of the soft/hard cover report (Section 5.1.3 to 5.1.10 and the relevant appendices) only applicable if requested by the supervisor or the faculty.**

5.1.1 Text

Use computer type written using word processor software.

5.1.2 Language

Use British (United Kingdom) English. Avoid the use of such as “I”, “us”, “me”, “myself” and etc. in the main content of the report, except the conclusion chapter. Use “this study”, “this project”, “this research” or “the author” in situation where self-reference is required. Student must adopt appropriate English writing level. Student must pay attention to use correct spelling, grammar, punctuation, sentence structure, continuity and etc.

5.1.3 Paper

Use only high-quality A4 80-gram paper, dimensions 210 mm x 297 mm. This paper should be white in colour, acid free and “non-erasable”.

5.1.4 Printing

Print using high-quality laser or ink-jet printer. Use colour printing mode for figures, diagrams etc. if applicable. Text and figures must be legible and clear. All typing, print, illustrations, etc. should be on one side of the paper only.

5.1.5 Binding Type

- Comb bind (Soft cover)
 - Interim Report
 - Final Report for evaluation
- Permanent bind (Hard cover)
 - Final Report after approval

5.1.6 Soft Cover

Refer to **Appendix D** for items required on cover and refer to **Appendix J** for sample. The soft cover can be obtained from faculty office.

5.1.7 Hard Cover

Refer to **Appendix D** for items required on cover and refer **Appendix K** for sample. All letters must be printed in boldface (gold) capital letter. The minimum size for the letter is 5mm in height.

5.1.8 Spine

Refer to **Appendix E** for items required on spine. All letters must be printed in boldface (gold) capital letters. The minimum size for the letter is 5 mm in height. Direction of lettering must run from the top of spine.

5.1.9 Length of Report

The minimum number of words for **Interim Report is FIVE thousand (5000) words** and **Final Report is TEN thousand (10000) words**. Note that, the words count is applicable for main content (body) of the report only.

5.1.10 CD/ DVD Label and Envelope

The CD/ DVD envelope should be properly made and attached to the last page of the report. Refer to Appendix K.

5.2 Content Layout and Text Formatting

The following describes the content layout and text formatting of the report.

5.2.1 Page Margins

The minimum-sized page margins are as follows:

- Left 40 mm
- Right 25 mm
- Top 25 mm
- Bottom 25 mm

5.2.2 Page Numbers

Page numbers should be centred and placed in the footer 15 mm from the edge of the bottom of the page. Use typeface Times New Roman and the font size is 12 pt. Every page except the title page must be numbered. Title page is “I” but is not numbered. Preliminary pages are to be numbered in upper case Roman numerals (I, II, III, IV and etc). The text pages are to be numbered in Arabic numerals (1, 2, 3 and etc.) and all pages must be numbered consecutively and continuously, irrespective of volumes.

5.2.3 Typesetting

- Typeface: Times New Roman for all text in report
- Text: Regular, font size 12 pt
- Chapter Title: Uppercase, bold, centred, font size 14 pt
- Sub-title (all levels): Title Case, bold, align left, font size 12 pt

5.2.4 Chapter Numbering

Chapters and sections must be numbered and titled. Each sub-title must be followed by at least one paragraph that describes the section and content. Note that student should avoid sections more than level four.

Example:

CHAPTER 3

MAIN TITLE

3.1

Sub-title (2nd Level)

This section describes...

3.1.1

Sub-sub-title (3rd Level)

The following describes...

3.1.1.1

Sub-sub-sub-title (4th Level)

The detail of ...

Figure 5.1: Example of Chapter Numbering

5.2.5 Spacing

Line spacing is one and a half (1.5) spacing. Use double (2.0) lines spacing for the next paragraph.

5.2.6 Paragraph

The last paragraph of any page should comprise at least two lines of text. Any heading appearing near the bottom of a page should be followed by at least two lines of text. If this is not possible, the heading and the line should be continued in the next page. If the last paragraph of a page has to be continued on the next page, there must be at least two lines of the text appearing on the next page. Each paragraph should be indented one tab (1.27 cm or 0.5 inch) from the left margin. General alignment for texts in paragraph should be “Justified”.

5.2.7 Numbers

Avoid beginning a sentence with a number or symbol. Numbers have to be used with appropriate units (e.g. 30%, 55 ml, 3 cm, 5 km, 10 kg, RM 30,000, 35 °C and etc.). Otherwise, the number has to be spelled out in words (e.g. three sections, five categories, three tools, thirty lines etc.). Use appropriate mathematic operators (e.g. multiplication should be “×” and not “x”)

5.2.8 Equation

Equations represented in symbols or variables must be italic (e.g. k , M , y , P , θ , Ω etc.) and centred. The equation must be referred to by number in brackets with respect to the chapter. The symbols or variables in equations must be described clearly in text. There should be one and a half (1.5) lines spacing before and after the equation.

Example:

The following is the fourth equation appears in Chapter 5:

Albert Einstein proposed mass–energy equivalence equation as follows:

$$E = mc^2 \quad (5.4)$$

where E is energy, m is mass, and c is the speed of light in a vacuum.

....

they can be computed using the cosine law defined as,

$$\alpha = \arccos \frac{a^2 + b^2 - c^2}{2ab} \quad (5.5)$$

where a and b denote the two sides next to the angle α , and c is the side opposite to α .

Figure 5.2: Example of Equation in Text

5.2.9 Table

Tables in text must be centred, numbered with respect to the chapter and captioned. The caption should be positioned at the top-center of the table. The caption should be bold and title case and single spacing. A table should be placed after it has been referred to for the first time in the text. There should be one and a half (1.5) lines spacing before and after the table. Tables which are presented in landscape format should be bound with the top of the table to the spine.

Example:

The following is the third table described in text of Chapter 3:

... Table 3.3 show the performance comparison of the ...

Table 3.3: Biometrics Performance Comparison.

Biometrics	Accuracy (%)
Hand Geometry	76.5%
Finger Print	95.2%

Figure 5.3: Example of Table in Text

5.2.10 Figures

Items that can be represented as figures include but are not limited to diagrams, pictures, charts, programming codes, pseudo codes, graphs etc. All figures in text must be centred, numbered to respect with the chapter and captioned. The caption should be positioned at the bottom-center of the figure and single spacing. The caption should be bold and title case. A figure should be placed after it has been referred to the first time in the text. There should be one and a half (1.5) lines spacing before and after the figure. Figures which are presented in landscape format should be bound with the top of the table to the spine. Note that, all figures in the content must be referred or explained or described in content/ text. Otherwise the figures should be placed in appendix.

Example:

The following is the fifth figure described in text of Chapter 7:

Figure 7.5 illustrates the sample image acquired by using the online and offline methods respectively.

Figure 7.5: Palm Print Image Acquired using (a) Offline System, and (b) Online System.

Figure 5.4: Example of Figure in Text

5.2.11 Reference

Any material taken from another source must be identified, and a brief reference to its source included in the text. Thus, every reference quoted or cited in the thesis must be included in the list of references accordingly using American Psychological Association (APA) style. References should be ordered alphabetically and followed by chronological order for same author. Typeface to be used is Times New Roman and the font size is 10 pt with one and a half (1.5) lines spacing. Use double (2.0) lines spacing between entries. The second line of a reference must be indented 12.7 mm.

Example:

Citation in text:

According to Adams and Zukofsky (1999a), they are adopting... The survey also found that ... (Adams and Zukofsky, 1999b).

...

...

Reference:

...

Adams, J.A. & Zukofsky, S.P. (1999a). I saved my patient with the APA.

...

Figure 5.5: Example of Reference

Note that, student shall to refer the “*CitationInReferenceList.doc*” and “*CitationStyleForReferenceInText.doc*” document for more information and examples about references and citations. The two documents can be downloaded from the FIST-FYP website (<http://fist2.mmu.edu.my/?page=32>).

5.2.12 Appendices

The pages should be numbered continuously with the rest of the text. For computer type written appendices, the typeface to be used is Times New Roman and the font size is 10 pt and one and a half (1.5) lines spacing.

5.3 Documentation Template and Layout Example

Students are encouraged to follow the “*FypDocumentationTemplate.doc*” provided in the FIST-FYP website. Students may also refer to the some layout examples in the appendices listed below:

- Appendix D: Layout for the Cover of the Interim/ Final Report/ Finalised FYP 2 Report/ Hardcover Report
- Appendix E: Layout of Spine of the Final Report Hardcover Report (if requested)
- Appendix F: Layout of Title Page of the Interim/ Final Report/ Finalised FYP 2 Report
- Appendix G: Layout of Copyright page of the Interim/ Final Report/ Finalised FYP 2 Report
- Appendix H: Layout of Declaration page of the Interim/ Final Report/ Finalised FYP 2 Report

AWARDS, EXHIBITIONS AND CONFERENCES

6.1 Awards/ Competition

There are many awards offered as a motivation for your FYP effort. This also really looks good in your resume and it will help increasing the chance of getting a good job, not to mention that some of the awards are worth quite a sum of money as well.

The faculty promotes participation in competitions co-organized by the faculty and industrial partners or other external bodies. Some of the awards/ competitions that may be available for student to participate in are as follows:

- **IBM Best IT Project Award:** For best FYP that utilizes IBM technologies and tools.
- **Shell Technology Innovation Award:** Five best FIST FYP projects shall be selected for competition with FYP projects from each faculty.
- **MSC Asia Pacific ICT Award (APICTA):** FYP projects can be nominated by the students themselves for participation in the Best of Tertiary Student Project (Software/Hardware or Creative Multimedia) Category, the winner shall represent Malaysia for Asia-Pacific Finals. Visit www.msicapicta.com.my for details.
- **Microsoft Imagine Cup Award:** Imagine Cup is your chance to innovate, show the world what you've got, and win some serious prizes. Visit www.imagincup.com/ for details.

6.2 Exhibition/ Expo

A student who develops an impressive and demonstrable project or prototype may be requested by supervisor, faculty or university to participate in local or international exhibition/ expo to introduce their products to people. This will provide exposure for the student who would like to be an entrepreneur and meet potential investors or

customers who may buy or invest into their project. Some exhibitions may provide certificates, medals and awards and the projects may be evaluated by judges from industry. The duration of the exhibition/ expo is about 1 to 3 days. Some of the exhibitions/ expos which may be available for student to participate are as follow:

- **Invention Innovative & Technology Exhibition (ITEX):** The leading exhibition in Asia that showcases new inventions, technologies and products. Judging will be conducted and medals and certificates will be awarded to winners. Visit www.itex.com.my for more details.
- **Malaysia Technology Expo (MTE):** An exhibition that showcases technologies and products. Judging will be conducted and medals and certificates will be awarded to winners. Visit www.mte.org.my for more details.
- **MMU Open Projects Exhibition:** Display and present projects to the public and visitors. Certificates will be provided to students.

6.3 Proceedings Conference

Students who have good research work are encouraged to submit research papers to a well-known (listed in ISI-indexed or MMU conference list) local/ international conference. The student should discuss this with the supervisor to obtain advice and recommendation before submitting his/ her research paper to any conference. The supervisor may guide and provide some knowledge related to research publication to the student. Student is advised to do an in-depth literature review to grasp the techniques on how to write a research paper. There are plenty of sources to download research papers for readings and references, some of the well-known online research libraries are IEEExplore, ACM, Science Direct etc.

PITFALLS AND PROBLEMS

7.1 Problems

The final year project will be a demanding but exciting learning experience. However, it is not without problems which, if not identified and addressed, could seriously affect the final result and ultimately reduce your grade. In this section we mention some of these problems and how to avoid them.

- **The “Overachiever” Problem.** A common problem is selecting a topic that is far too ambitious for the allotted time. Remember that you have only 11 weeks to finish the coding, debugging, experimenting, collecting data and testing. Be careful not to select a topic that is unrealistically large. This can lead to frustration as well as errors caused by “cutting corners” and hurrying through the implementation. Discuss with your advisor the scale of what you are planning. If he or she thinks it may be too large, consider implementing the project in stages, each complete in itself. When FYP 1 is working move on to FYP 2. If you do not finish FYP 2, however, you still will have a functioning system.
- **The “Do It Tomorrow” Problem.** 11 weeks sounds like a long time, but it goes by quickly. You need an implementation schedule that allocates reasonable amounts of work throughout the entire semester. Then you must stick to that schedule. Don’t be tempted to postpone work on the project because Week 11 seems so far off. All that happens is that during the final few weeks you rush madly to get something working, and software implemented in a rush rarely works correctly!
- **The “Poop Out At the End” Problem.** You have worked hard for 11 weeks to complete this project. You have spent many late nights and chased down hundreds of bugs, but it is now working, so are you done? Absolutely not! The project grade is not based only on the programs you develop but also on your

written reports and oral presentations. Don't produce a poorly written paper or give a poorly organized presentation. That will negate much of your good work. Put in the time needed to prepare both a well written, high-quality final report and a well-organized, polished presentation. Good work on these last steps will ensure that you receive a grade that fairly represents the work you have done.

APPENDICES

Refer to next page.

Appendix A: FYP Meeting Log

Faculty of Information Science and Technology (FIST)

Final Year Project Meeting Log

(To be filled in by Student)

MEETING DATE:	MEETING NO.:

NOTES:

1. Items 1 – 3 are to be completed by the students before coming for the meeting. Item 4 is to be completed by the supervisor.
2. For FYP 1, total six log sheets are to be submitted (every other week*).
3. For FYP 2, total six log sheets are to be submitted (every other week**).
4. Log sheets are compulsory assessment criteria for FYP. Student who fails to meet the requirements of log sheets will not be allowed to submit FYP report.

*: week 1, 3, 5, 7, 9, 11 or 2, 4, 6, 8, 10, 11 of the first trimester (week 12: report submission, weeks 13 & 14: presentation)

**.: week 1, 3, 5, 7, 9, 11 or 2, 4, 6, 8, 10, 11 of the second trimester (week 12: report submission, weeks 13 & 14: presentation)
